

Kemiker, pensioneret, totalt uafhængig. Svære
Hg-sygdomme i nær familie --> studeret kvikksølvs
patogenese i 20 år. Bl.a. kureret en MS-syg.

19.11.2006.

**Professor Bente Moen, Universitetet i Bergen,
Professor Nils Roar Gjerdet, sammesteds og
Professor Bjørn Hilt, NTNU i Trondheim.**

Fru Tordis Klausen har fortalt om "**Amalgam - quo va'dis?**" med Dem som kursgivere. Til et lignende svenskt kursus bemærker psykiateren, MD Per Dalén, Viken/Helsingborg: "Man kan undra HUR länge dessa tandläkare skall fortsätta att försvara något som nu bara kan gå en väg". Tilmed er det nu **muligt at retsforfølge brugen af amalgam.**

Dette brev indeholder alarmerende information og kritik, som er meddelt EU's Sundhedskommissær personligt.

I marts 2006 publicerede Dr. odont. Gianpaolo Guzzi og kolleger ved det retsmedicinske Inst. ved Universitetet i Milano samt en australsk cancerforsker deres artikel:

"Dental Amalgam and Mercury Levels in Autopsy Tissues - Food for Thought"

i The American Journal of Forensic Medicine and Pathology (1) med klar hentydning til det juridiske aspekt, bilag. Dens resultater er alarmerende, fuldstændigt indiskutable, og stemmer overens med Hg's kemi og tidligere resultater:

Ifl. Retningslinjer fra SHdir. 2003 "er det påvist, at kvikksølv-mængden i hjernen hos avdøde korrelerer med antall amalgamfyllinger", at "kvikksølv-koncentrationen i fostre korrelerer med antall amalgamfyllinger hos mor", og at "mængden kvikksølv i morsmelk øker med økende antall amalgamfyllinger hos mor". At der "ikke er påvist sammenhæng mellom amalgamfyllinger og sygdom" beror på irrelevante analysemetoder: Hg-urin uden provokation.

Agendaen er da at erkende og forstå de skete skader, hvor ubehageligt det end er, efteruddannelse i korrekt amalgamsanering med fuld beskyttelse af patient og klinikpersonale samt i teknikken i detoxifikation uden retoxifikation, en kæmpeudfordring p.g.a. en fatal brøler.

Hg's aggressivitet er ren kemi med medicinske følger i ikke-resistente personer. Angrebet sker i h.t. kemiens love, som er givet os af "Vorherre". De retter sig faktisk ikke efter, hvad tandlæger og læger mener. Hvis medicinsk forskning byggende på sandsynligheder når frem til modstridende resultater, må den vige! Det er ubegribeligt, at læger og tandlæger der burde have lært kemien og dens væsen at kende i gymnasiet, så totalt dropper denne exakte videnskab til fordel for usikre medicinske metoder, der har så svært ved at leve op til Cochrane-standard, og som kan udelukke ubekvemme hypoteser, hvis det passer ind politisk. Med mindre det drejer sig om at have noget, som ingen udenforstående kan dechiffrere, og som også i mistænkelige tilfælde tyranniserer verden under dække af videnskab.

EU's Sundhedskommissær, Markos Kyprianou er lydhør over for amalgam som årsag til kroniske følgesygdomme. Mit bidrag til hans konsultation "Green Paper on Mental Health", bilag. http://ec.europa.eu/health/ph_determinants/life_style/mental_health_en.htm Ex mit

seneste brev til M Kyprianou med Dr. Guzzis undersøgelser:

“The front page of EU Public Health says that up to 27% of the citizens experience a mental health problem and the number of suicides exceeds that of traffic death.

Alarming and convincing news.

The page emphasizes two subjects: 1) Depression. It is well-known that this is one of the most frequent disorders of Hg origin. 2) Suicides. Recently Guzzi et al. published autopsy studies and found a significant correlation between Hg in the pituitary and thyroid glands, cerebral and renal cortex and the number of amalgam surfaces. Five of six suicidal cases were in the top region with levels 3 times higher - a “forensic scenario”(1).

The Norwegian TV has broadcasted the "Mercury Girls" and the "Mercury Children". Dental assistants had inhaled Hg-vapor while heating amalgam over open fire and kneaded it in their bare hands. Hg penetrates the skin to the blood. (Also presented to the FDA-hearing, Sept 6-7. An internal report was rejected. For the first time ever FDA dealt with neurology in this connection and asked for more information). In this country a TV-copy made commotion. Preliminary figures: Of 1.700 assistants 448 reported problems during pregnancy: abortions, premature, stillborn and malformed babies. 14 cases of multiple sclerosis, 117 of depression and 41 of fibromyalgia.

General information.

Our genes do not stand toxic heavy metals. They developed during 100.000 years when our ancestors lived as hunters. We have always been attacked by so-called free radicals (very reactive compounds) and evolution has given all living species a defence of antioxidants and vitamins. In healthy individuals attack and defence are in balance. A chronic surplus of free radicals in larger amounts is pathogenic, creating mental ill health and other chronic diseases. The Encyclopedia of Food Science lists some 50 (2). Amalgam-Hg is by far the main generator of free radicals in non-resistant patients.

Non-orthodox dentists and physicians know the truth, skilled chemists, biochemists and food-scientists, too. They also emphasize food supplements, antioxidants and vitamins to prevent, delay or partly cure of diseases. However, due to censorship their papers do not appear in top medical journals. In contrast orthodox medicine does not care. Universities neglect teaching and research of our most systematic and severe toxic treatment in the West and they show even resistance and little curiosity to solve the dogmatic and tabooed problem.

Positive results are claimed from genetic research. However, it can not be excluded whether they chase Hg-damaged genes and DNA's? Also stem cells may be polluted.

Conclusion.

Thus the man-made diseases of amalgam origin are taught, diagnosed, treated, medicated and researched on a highly incomplete background. The system has got impotent - an enormous waste of resources and suffering to the sick and their families. Many results may be reached by biochemical thinking alone, quicker, more reliable and cheaper. My controversial views should be considered now to prevent a delay for another five years.

Prof. Boyd Haley, world-famous biochemist of Univ. of Kentucky: “It is the inability to see the effects of chronic, low level toxicities on human health that has been, and remains, our greatest failing as intelligent beings” (3). Prof. L.W.Chang, outstanding toxicologist of Univ. of Arkansas: “The diseases of the 21th century will be dominated by heavy metals” (4).

Til sidst: Finder De det planlagte amalgamkursus i januar så fremtidsrettet, at den store udfordring, der venter, fremskyndes? Og: Da Deres redegørelse om "Kvikksølvjentene" og "Kvikksølvbarna" til regeringen - som i øvrigt er orienteret om mit "Green Paper" - også får indfly-

delse på den danske undersøgelse, venter jeg spændt på, om mishandlingen af dem bliver accepteret.

Med venlig hilsen
